

Essentials of R for researchers

Are you a researcher looking to harness the full potential of data analysis and visualization for your work? Join our exclusive workshop on the "Essentials of R for Researchers" and embark on a journey to become an R programming expert.

Resource person

Dr. Sameera Viswakula

Senior Lecturer,
Department of Statistics,
University of Colombo

Contents:

Introduction to R/RStudio

Summary statistics and exploratory data analysis

Hypothesis tests for one and two sample means/proportions, chi-square test of association and correlation

Expected outcomes

Write basic codes in R for simple data analysis.

Define, calculate, and interpret summary statistics and basic graphs to explore data.

Perform hypothesis tests; mean, proportion, two population means and proportions, chi-square test of association, correlation.
